Klipboard DVI - Key functionality summarized

This document summarizes the key capabilities available within the Klipboard DVI solution.

General

Klipboard DVI enables businesses to complete structured digital vehicle inspections. It supports capturing findings, images and videos, linking inspections to work orders, and producing quotes and final reports for customers.

Structured, customizable inspections

Users can build custom inspection templates with a range of question types, including simple RAG ratings, dropdown options and free-text notes. Inspections can include images, videos and markup to document findings clearly.

Integration with Autowork One

Klipboard DVI integrates with Autowork One to support a smooth flow of inspection findings into the quoting process. Inspection results can be linked directly to existing work orders, allowing vehicle and customer details to be pulled through automatically.

Findings captured during the inspection, including any suggested parts or supporting documentation, are sent to Autowork One for review. Autowork One then returns the confirmed parts, labor items and associated costs, which are synchronized back into Klipboard DVI for the quote to be assembled and sent to the customer.

Klipboard DVI features at a glance

- Custom inspection templates
- Structured findings, including images and videos
- Automatic population of customer and vehicle details
- Link inspections with work orders
- Quoting based on inspection findings
- Customer approval at line level
- Final inspection reports
- Multi-device access (PC, tablet, phone)
- Custom themes
- Admin dashboard for oversight
