ERP Go (formerly K8 Trader)**	ERP Go is a suite of software designed to meet the needs of the small to medium business. Please refer to the K8 Trader factsheet for more details.
K8 Layered Applications **	K8 Layered Applications comprise of a suite of software applications and apps that have been developed to deliver optimised, mobile friendly experiences to users on Smartphones and other SMART devices. Note that these applications are designed to integrate with K8 and to utilise core K8 features and, as such, versions of these applications may be restricted to operate with specific versions of K8.

K8 LV Layered Applications**	K8 LV Layered Applications comprise of a suite of software applications and apps that have been developed to deliver optimised, mobile friendly experiences to users on Smartphones and other SMART devices. Note that these applications are designed to integrate with K8 LV and to utilise core K8 LV features and, as such, versions of these applications may be restricted to operate with specific versions of K8 LV.
K8 Layered Application: K8 ePOD **	K8ePOD is a Layered Application which provides the ability to capture proof of delivery detail, including recording the recipient and their signature, for each delivery drop made. It allows for the delivery manifest, as built within K8, to be exported to a mobile device and for the delivery or collection for each drop to be confirmed remotely. Signatures, notes and photographs are automatically uploaded into K8 when the device is connected to the airwaves, with this detail stored against the specific delivery or collection within K8. Please refer to the K8 ePOD factsheet for more details.
K8 Layered Application: K8 eReceipts **	K8 eReceipt is a Layered Application is designed for use within a K8 standard branch (non WMS), enables a user to select a purchase order and to confirm receipt of expected lines from that purchase order, allowing for the receipt of various types of product. Please refer to the K8 eReceipts factsheet for more details.
K8 Layered Application: K8 ePick **	K8 ePick is a Layered Application which is designed for use within a K8 standard branch (non WMS), enables a user to select a pick to be undertaken and to then be guided to each bin in turn to process the pick. The user may confirm the quantity that is being picked either by keying the number or they may scan the product barcode and have the quantity picked automatically incremented. Please refer to the K8 ePick factsheet for more details.
K8 Layered Application: K8 eWarehouse**	K8 eWarehouse is a Layered Application that is designed for use within a K8 Warehouse branch operating K8's Warehouse Management System (WMS). It enables an operator to select, execute and complete warehouse tasks that have been created in K8. Please refer to the K8 eWarehouse Factsheet for more details.
K8 Trader eStockCheck**	K8 eStockCheck is a mobile application (app) designed for use in conjunction with K8 Trader. It enables users to count stock and to upload the results of these counts to K8 Trader. The stocktakes are generated within K8 Trader, utilising the existing K8 Trader functionality. Please refer to the K8 Trader Summary Factsheet for further details.
K8 LV Promotions **	The Promotions Module in K8LV adds more depth to order pricing by allowing you to apply attributes to item and customer groups. You can apply time bound promotions and offer product specific or group pricing methods.
K8LV CRM **	K8 LV CRM allows you to maintain both leads and opportunities which are fully integrated with the core system. Quotes can be held against CRM leads and converted to customers and orders as required.

K8 LV EDI **	The K8LV EDI Module allows the transaction of electronic data between customers and suppliers in the Tradacoms format
K8 LV Trade Portal API **	Our API allows access to customer and product data held within the system and provides the ability to create customers, quotes, orders and invoices from external sources
K8 LV MRP **	The MRP module allows you to upload forecasts and manage demand on manufactured items and their components in a time phased approach. It allows generation of required orders from the forecasted or actual demand.
K8 LV Customer Returns **	The Customer Returns module allows you to progress returns for customers through RMA documents and includes the ability to record reason codes for returns and links all related documents.
K8 LV Batch Testing **	K8 LV batch testing allows you to generate tests required against products or batches of products. Test results and pass/fail criteria can then be used to release or quarantine batches.
K8 LV Landed Costs **	The Landed costs module in K8 LV allows you to manage consignments of stock and update all associated landed costs associated with the shipment. Costs for the consignment can then be applied to all items to reflect the true cost of a batch or single product.
K8 LV SFDC **	The Shop Floor Data Capture (SFDC) module allows a web based application to clock on and off work order processes to record the time taken in manufacture.
K8 LV eStockcheck **	K8LV eStockCheck is a mobile application (app) designed for use in conjunction with K8LV stock taking processes. It enables users to count stock and to upload the results of these counts.
K8 LV Job Costing **	K8 LV Job Costing module is a centralised repository for all information relating to a job. Sales Orders, Purchase Orders, Invoices and stock items can all be recorded along with start and end dates for the project/job. Invoices can be raised directly from the job costing module.
K8 LV Service Management **	The K8 LV Service Management module allows you to maintain and monitor contracts for service requirements. Contracts can have a start and end date and can hold information relating to contracts such as service requirements and items along with call creation for jobs to be carried out by engineers.
K8 LV Scheduling **	The scheduling module allows you to create and manage resource calendars, assign process times and routes to bill's of material and work orders and schedule the works orders against the resources required
K8LV Sales Contracts**	Sales contracts allow creation and management of timebound sales agreements and keep track of call off orders and contract progress.
K8LV Purchase Contracts	Purchase contracts allow creation and management of timebound purchase agreements and keep track of call off orders and contract progress
K8LV Fixed Assets	The asset register allows you to log and manage groups of assets, assign depreciation profiles and auto calculate month depreciation using a straight-line or reducing balance method.

K8LV Supplier Returns	The supplier returns module allows you to process returns to a supplier via an RMA document and links all related financial documents for ease of reporting.
K8 Configurator **	K8 Configurator is a responsive web app, which can be used on a desktop or tablet device. The product comprises two core components – a facility to maintain configurations, together with the rules and options for each, alongside the ability to raise quotations for configured and non-configured products, and any product available for sale in K8. Please refer to the K8 Configurator factsheet for more details.
K8 Sales Rep Portal **	K8 Sales Rep Portal is designed to enable a user to place a sales order via the Portal and to have it raised within K8, using this online web based solution. Please refer to the K8 Sales Rep Portal factsheet for more details.
K8 Making Tax Digital (MTD) Bridge *	The K8 MTD Bridge is a Windows based product that can be used to submit the company's VAT Return detail directly to Her Majesty's Revenue and Customs (HMRC) via the HMRC published API. Please refer to the relevant factsheet for more details.
Vecta **	Vecta is an on-line Sales Analytics and CRM solution, secured within a Data Centre, and accessible to authorised users over the public internet within a modern browser environment. Sales analysis and customer data, provided to Kerridge Commercial Systems Ltd (KCS) and in the format specified by KCS is uploaded to Vecta by KCS on a pre-agreed frequency.
Self Paced Learning **	Self Paced Learning comprises of a suite of training courses that are made available via the internet to nominated users subject to a valid subscription. These courses are based on K8 Babbage 13 and may be accessed by the user at a time of their choosing, subject to availability and connectivity. The courses are accessed via the KCS Learning Portal and may be run at a time of choosing. Please refer to the Self Paced Learning factsheet for further details.

K8 MFS Layered Application: Field Service Mobile Application **	K8 MFS Layered Application that is designed to operate on hand held devices and provides a remote engineer with the ability to view and clear calls. Additional Users may be added to an existing licence but no longer available to buy as a new product.
K8LV Layered Application: K8LV eReceipts **	K8LV Layered Application that is designed to operate on a hand held device and supports product receipt operations. It enables a user to receipt goods from a purchase order that has been created in K8 LV. Please refer to the fact sheet for further details – For K8LV only

K8LV Layered Application: K8LV ePick **	K8LV Layered Application that is designed to operate on a hand held device and supports picking operations. It enables a user to select a pick to be undertaken and to then be guided to each bin in turn to process the pick. The user may confirm the quantity that is being picked either by keying the number or they may scan the product barcode and have the quantity picked automatically incremented. Please refer to the fact sheet for further details – For K8LV only
ePOD for K8 Trader **	The ePOD for K8 Trader app enables a manifest of deliveries to be downloaded from the K8 Trader system and then enables a driver to deliver in turn to each customer. The delivery may be confirmed, capturing signatures and/or images. This will update the K8 Trader system as outlined below. In addition, ad-hoc collections may be performed and the user can record details of issues encountered. Please refer to the ePOD for K8 Trader factsheet for more details
eSales for K8 Trader **	The eSales for K8 Trader app enables a user to raise a quotation and/or sales order from within the app and have this imported into K8 Trader upon completion. In addition, the app will enables users to perform live enquiries from the K8 Trader system from within the app. Please refer to the eSales for K8 Trader factsheet for further details.
ePick for K8 Trader **	The ePick for K8 Trader app enables a user to select a pick to be undertaken and to then be guided to each bin in tun to process the pick. The user may confirm the quantity that is being picked eiterh by keying the number or they may scan the product barcode and have the quatity picked automatically incremented. Please refer to the ePick for K8 Trader factsheet for further details.
ERP Go Application Programming Interface (API) **	An API that enables an interface with other KCS software and external software products. This product is licenced for use per branch entity that will utilise it, as set up within K8 Trader. Please refer to the K8 Trader API Factsheet for further details.

Additional Third Party Software

Third Party Terms apply to all Additional Third Party Software.

Product	Description
Oracle ASFU licence *	Oracle application specific full use licence.
Oracle Linux **	Oracle Linux operating system provides the latest innovations, tools, and features that enable you to innovate, collaborate, and create solutions across traditional, cloud-based, and virtual environments.
Oracle Full Use *	Oracle full use licence
Postcode Database	Tool to look-up and use the Post Office postcode database
Speedbase **	Database for use as part of our Global 3000 product
Skynamo**	Skynamo is a field sales app built for manufacturers, wholesalers, distributors and importers who sell and service customers in the field. It puts every tool your sales reps need — customer information, product catalogues, pricing, order capture and call reporting — into a single mobile app that works online or offline. Skynamo eliminates duplicate data entry, gives managers full visibility of field activity, and helps sales teams spend more time selling and less time on admin. Please refer to the Skynamo fact sheet for more details.

Notes

* = available on a perpetual basis ** = available on a SaaS or annual Subscription basis
